The core of the Shapify technology is the booth's four wide-view high-resolution 3D scanners and automatic post-processing software. The scanners make a full circle around a person to capture the shape of their body from all angles. Getting precise measurements of the body makes it possible to replicate even the smallest details from the person's posture to the creases in their clothes. The scans captured in the booth are then automatically aligned, fused and turned into a watertight digital 3D replica of the person, ready for 3D printing. The full-color 3D portrait, or shapie, can be used in a variety of applications, from creating a timeless keepsake – a 3D printed figurine, to collecting body measurement data, opening up new opportunities for technological advances in fields such as medicine, dietology and fashion.
