

## RBI-203 [Wet Blast Machines](#) for cemented carbide chips

It is a semi-automatic device that handles super-hard blades one by one, and has provided more than 120 units to the world's largest manufacturers.

Because it is processed one by one, it is characterized by extremely high processing accuracy and uniform production quality. In addition to knife tip processing, it can also be used for surface coating pretreatment, coating pretreatment and other purposes.

※ An optional sludge filtering unit is required.

- An operator only changes the pallet
- Suitable for various kinds of work piece with easy setup change
- Collected the scrap of work piece and crushed abrasive material to realize stable processing

Dimensions □1200(W)×1150(D)×1800(H)mm

Work piece □Inscribed circle  $\phi 6.35 \square 25.4$ mm Thickness 2.4 □9.5mm \*Excluding holeless chips.
